mendix

The #1 Low-Code Platform for AI

Ideas to experiments to outcomes

Gartner predicts that "by 2026, **80% of enterprises** will have used GenAI APIs and models and/or deployed GenAI-enabled applications in production environments, up from less than 5% early 2023."

Organizations must chart and execute their AI path to maximize value. But even defining those challenges is challenging—**research, experimentation, execution.**

Mendix empowers organizations to quickly design, build, iterate, and deploy AI-augmented applications by providing everything a company needs to get started and succeed. Mendix is the leading low-code development platform for harnessing AI's transformative power.

Get ahead of the hype cycle

With AI moving so quickly, many organizations are in unexplored territory. But waiting until the hype cycle dies down puts you far behind competitors.

With our continually growing suite of AI capabilities, Mendix is the best option to help organizations ideate, experiment, and deliver smart applications enhanced with AI. Today.

Build smarter apps, build apps smarter

AI-AUGMENTED APPLICATIONS:

Leverage AI to enhance applications with intelligent automation, personalized user experiences, and content creation via data-driven insights, leading to improved efficiency, engagement, and decision-making.

Conversational UI: Easily implement an AI chatbot as a standalone app or a conversational experience integrated into your Mendix app.

Connectors: Create secure, integrated experiences leveraging GenAI and cognitive services from AWS and OpenAI.

ML Kit: Securely embed ONNX-compatible models into your application to decrease costs while improving performance and data privacy.

Multi-Experience: Deliver AI-generated information in various mediums, from web to native mobile to AR/VR to chat/voice assistants. Mendix UI/UX is best in class.

AI-ASSISTED DEVELOPMENT:

Developer time is valuable. Simplify the development process and ensure applications are built to best practices. **Mendix AI Assistance (Maia)** helps throughout the development lifecycle with features like:

Chat: Your virtual co-pilot. Trained on Mendix documentation, forums, and educational content, Maia provides immediate, detailed answers to your Mendix development questions.

Recommenders: Trained on over 12 million anonymized app logics. Provides real-time, context-driven recommendations and best practices as you build models, app logic, and workflows.

Generators: Leverage GenAI to automate tasks like translating text for multi-lingual apps and generating application components like domain models.
